

Our Data Center Evaluation Gives You Peace of Mind. And, a Roadmap for Success.

Data Center Evaluation Process

How do you assess the state of your Data Center against accepted industry best practices in real-time? VMC Consulting's Data Center Evaluation is your answer. Using a proprietary 50 point inspection process, we help companies evaluate each critical component of their Data Centers. Our Data Center Evaluation will help you determine the health of your Data Center operations, ensure compliance with NEC and other governing bodies, and improve efficiency, capacity and controls, while discovering new opportunities for process improvement.

Led by Senior Data Center Specialists trained in expert project management execution, our Data Center Evaluation is a four part process spanning approximately two weeks from initial interview to final report deliverable.

Interviews

- Evaluation of the business goals, expectations, processes, the plan, timelines and deliverables with key personnel, including Data Center Managers up to C-level executives
- Technical review of processes and issues with Data Center Technicians

Site Tour

- 50 point evaluation reviewing the four key areas of the Data Center: physical, environmental, structural and observed components
- Ground up review, analyzing each aspect of the Data Center
 - Security
 - Flooring Design
 - Power Management
 - Networking
 - HVAC
 - Air Handling
 - NOC Inspection
 - Ticketing Workflow
 - Capacity Planning

Process & Operations Analysis

- Review of data and findings with the Data Center management
- Analysis of "ticket" management capacity plan, equipment refresh, on-boarding and sun-setting, and hardware lifecycle communication plan and processes

Findings & Recommendations Report

- Detailed information reporting on each aspect of your Data Center, including strengths, weaknesses opportunities and threats, as well as recommendations to guide next steps for your Data Center and your IT organization
